Education

Western Governors University — Expected 2028
B.S. in Computer Science
Relevant Coursework: Data Structures & Algorithms, Software Engineering, Cloud Computing, Networking

Experience

AI Startup — May 2023 – Feb. 2024
AI Engineer Intern — Chicago, IL
- Built a Python plugin on the OpenAI API that turns images into file edits, cutting review time 40%.
- Engineered OpenAI vision image enhancement that auto-corrects uploads, processing 500+ images weekly.
- Deployed image processing on event-driven AWS Lambda, scaling on demand at under 2s response time.
- Exposed review and enhancement features through Java REST endpoints in the core product.
- Set up Docker CI/CD that auto-tested and shipped every merge, cutting releases from hours to minutes.

Ivy Tech Community College — Feb. 2024 – Jan. 2025
Associate Research Assistant, Computing Education Research — Indianapolis, IN
- Presented findings on student GitHub collaboration patterns to faculty and research staff.
- Built a FastAPI and PostgreSQL REST API centralizing LMS data from programming courses.
- Leveraged Flask and React for a commit and PR dashboard flagging uneven work across 50+ repos.
- Fixed broken GitHub-to-AWS connections, restoring tool deployments and cutting failed deploys to 2%.
- Automated Docker-to-GitHub pull request deploys, shipping tools into the codebase via code review.

Projects

Grassroots: Verified Sports Venue Marketplace | *React Native, Supabase, Python, C++, C#, AWS*
- Leveraged React Native and Expo to build one iOS and Android app where players split rental costs.
- Designed a Supabase PostgreSQL schema tying every cost split, payment, and payout to one booking.
- Offloaded scheduling to a C++/C# calendar engine and Dockerized AWS function, 95% faster loads.
- Automated vetting in Python: seeded public-park venues and cut admin review time 95%.

GIMFiT: AI Gym Equipment Guide | *React Native, Expo, Python, PyTorch*
- Leveraged React Native and Expo for a camera-first app turning one equipment photo into a workout.
- Trained a PyTorch classifier recognizing numerous equipment types at 90% accuracy.
- Built per-muscle sets and reps guidance to prevent overworking on unfamiliar machines.
- Paired each exercise with 5–15 second demo clips so users check form mid-workout.

Technical Skills

Languages: Python, Java, JavaScript, SQL, C++, C#
Frameworks: React, React Native, Expo, Flask, FastAPI, PyTorch
Cloud & DevOps: AWS Lambda, Docker, Git, CI/CD, Serverless, Cloud Security, Virtualization
Data & AI: PostgreSQL, Supabase, REST APIs, OpenAI API, Prompt Engineering
